

DISC HARROW

Disc Harrow can be mounted on a tractor by three point linkages and controlled by tractor hydraulics. Construction includes mainframe which embeds two gangs of discs mounted one behind another. Front gang cuts and throws soil in inward direction where as rear gang throws cut soil outwards hence complete soil is cut under its width. Its wide applications include primary as well as secondary tillage and it is ideal for preparing seed beds since it can effectively cut heavy clods, crop residues and mixing them with organic manure completely. It is much used at Field Disking at Orchards, Plantations and Vineyards Cultivations.

OFFSET DISC HARROW

Offset Disc Harrow is tractor hydraulic operated implement which trails behind the tractor and effectively breaks up clods with deeper penetration due to its heavy weight and design. Both disc gangs are offset at an angle to ensure no soil remains uncut and heavy crop residue with organic matter is effectively buried. Provision of handle screw enables it for the adjustment of inclination required for the disc penetration depth hence suitable for different cutting depths for varying soil conditions. Heavy duty sturdy mainframe with heavy duty spools and hardened discs ensure proper centerweight and longer life.

SPECIAL FEATURES

- » Sturdy Mainframe and design.
- » Handle Screw arrangement for cutting depth adjustment.
- » Hardened sharp edged discs to ensure proper cutting of roots and clods.
- » Easy to mount on tractor with three point linkages and easy to operate.

MODELS & SPECIFICATIONS

MODELS	WIDTH in mm	LENGTH in mm.	HEIGHT in mm.	WORKING CAPACITY in mm	WEIGHT in Kgs.
10 Disc	1650	1550	1250	1150	310
11 Disc	1550	1800	1250	1420	340
12 Disc	2100	1500	1371	1250	355
14 Disc	2130	1803	1371	1450	410

All above specifications are approximate.

As continuous improvements are contemplated, the illustrations and descriptions are not binding. Manufacturers reserve right to discontinue or make change in above models without any prior notice.
